Aims and Scope

Archives of Hand and Microsurgery (Arch Hand Microsurg) is the official journal of Korean Society for Surgery of the Hand, Korean Society for Microsurgery, and Korean Society for Surgery of the Peripheral Nerve. The journal publishes Original Articles and Reviewed Articles related to the pathophysiology, diagnosis, and treatment of diseases and condition of the upper extremity, microsurgery and peripheral nerve. The journal also publishes Case Reports, Technical Notes, and Clinical Perspective Reports. Accepted submissions will be published in the print journal as well as in the online version. It is published four times per year on the first day of March, June, September, and December.

For specifics not mentioned in the instructions, “Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly work in Medical Journals (http://www.icmje.org/recommendations/)” can be applied.

Editorial Policies

Statements and opinions expressed in Archives of Hand and Microsurgery are those of the author(s) and not necessarily those of the Editor or Publisher. The Editor and Publisher disclaim any responsibility for such published material. Neither the Editor nor the Publisher guarantees, warrants, or endorses any product or service advertised in this publication; nor do they guarantee any claims made by the manufacturer of such product or service.

Ethical Standards

Submitted manuscripts should not have been previously published or under consideration for publication elsewhere. Manuscripts containing same or similar contents should not be submitted for publication to other journals. Redundant or duplicate publication of a paper can be considered acceptable under specific circumstances according to the Recommendations for the Conduct, Reporting, Editing, and Publication of Scholarly work in Medical Journals (http://www.icmje.org/recommendations/).

Articles involving research conducted in human subjects must include a statement that subjects provided informed consent and that the study was approved by an institutional review board. Manuscripts reporting animal experiments must include a statement in the Materials and Methods section that animal care complied with the guidelines of an animal utilization committee or a similar committee.

All authors should participate in planning and conducting a study, acquiring and analyzing data, drafting and revising a manuscript, and approving the final version of an article to be submitted. Authors should disclose any potential conflicts of interest and financial support. Statements on conflict of interest have no influence on the editorial decision to publish.

For policies on research and publication ethics not stated in the instructions, if the journal faces suspected publication misconduct, Archives of Hand and Microsurgery adheres to the flowchart described by the Committee on Publication Ethics (External link http://publicationethics.org/resources/flowcharts).

Copyright

All material published in Archives of Hand and Microsurgery is vested in Korean Society for Surgery of the Hand, Korean Society for Microsurgery, and Korean Society for Surgery of the Peripheral Nerve. The corresponding author of each manuscript will be required to complete a copyright assignment form on acceptance of the manuscript.

Peer Review

The review process is strictly confidential. All submitted papers are peer-reviewed by more than two accredited experts in the corresponsive field. A decision on the publication of letters to the editor-in-chief is made by reviewers. A decision on acceptance or rejection for publication is sent to the corresponding author. When the final version of an accepted manuscript is prepared according to the requirements of the journal, the publication date is determined. Rejected manuscripts will not be reconsidered for publication.

Submission of Manuscript

The manuscript submission and review process is entirely online at http://www.handmicro.org/submission. Authors should check the author checklist and sign the journal’s copyright transfer form in manuscript submission. Manuscripts should be submitted as MS-Word, Hangul, or PDF files. Authors should check converted files before final submission. Other correspondence should be addressed to Editor in Chief, Min Jong Park, Department of Orthopaedic Surgery, Samsung Medical Center, Sungkyunkwan University School of Medicine, 81 Irwon-ro, Gangnam-gu, Seoul 06351, Korea (Tel: +82-2-3410-3506, Fax: +82-2-3410-0061, E-mail: mjpark3506@skku.edu).

Reporting guidelines for specific study designs: For the spe-
cific study design, such as randomized control studies, studies of diagnostic accuracy, meta-analyses, observational studies and non-randomized studies, it is recommended that the authors follow the reporting guidelines listed in the following table.

<table>

**Organization of the manuscript:** Manuscripts not complying with these requirements will be returned to the author(s) for appropriate formatting modifications prior to review. Information on the authors and their affiliations should not be included in the manuscript other than the title page.

**The manuscripts should be arranged in the following order:**

**Title page:** The title page should contain the full title of the paper (in English), the names of the authors and of the institutions (in English), the full title of the paper (in Korean), the names of the authors and of the institutions (in Korean), and information on the corresponding author. The title should be succinct and accurate, if possible and must include important words of the study. It should be avoided as much as possible to lead with expressions like “clinical research on~” or “the study on~”. The title should not have more than 30 Korean characters and 20 English words.

If authors are at different institutions, first present the institution where most of the work was carried out, and indicate individual departments and institutions by inserting a superscript letter immediately after the author’s name, and the same letter in front of the appropriate institution (when necessary, the superscript letters should be used in the following order: Arabic number, 1, 2, 3...). The address, telephone number, fax number, and e-mail address of the corresponding author should be placed in the lower portion of the title page both in Korean and English.

Every person listed as an author should have materially participated in the design, execution, and analysis of the study and should verify the accuracy of the entire manuscript before its submission. Lesser contributions are appropriately noted in an acknowledgment section on the title page. The first name and the last name should be written in this order for English names. The surname and the first name should be written in this order not separated by a space for Korean names.

In the blind title page, only the title of the manuscript should be written both in Korean and English. Information on the names of the authors and their affiliations should not be included.

**Abstract:** Information on the authors and their affiliations should not be included in the abstract. Also, do not include footnotes or references in the abstract. For organization of manuscripts, the English abstract and Korean abstract should be on the first page and the second page, respectively. The abstract should not exceed 500 characters and 250 words for Korean abstract and English abstract, respectively. The abstracts should contain the same contents. The abstract should state the purpose, methods, results, and conclusion in each paragraph in a brief and coherent manner. Under the Korean abstract, keywords should be inserted in Korean while under the English abstract, keywords should be written in English (maximum 6 words). They should be listed in the following order: anatomical name (illness), diagnosis (area), and treatment, for example, scaphoid, Fracture, Herbert Screw for a paper entitled, “Operative Treatment of Carpal Scaphoid Fractures with Herbert Screw”. Abbreviations or references are not allowed in the abstract. For the selection of keywords, refer Medical Subject Heading (MeSH, http://www.ncbi.nlm.nih.gov/mesh).

The abstract should be structured to include the following sections: Purpose: The rationale, importance, or objective of the study should be described briefly and concisely in one to two sentences. Methods: The procedures conducted to achieve the study purpose should be described in detail, together with relevant details concerning how data were obtained and analyzed and how research bias was adjusted. Results: Provide results, with data, p-values, and standard deviation of mean (or standard deviation). Present most important findings first. Please provide p-values and numbers to support your methods findings. Conclusion: State only what your study identified and what it demonstrated. Do not include extraneous information not backed up by the data of your study.

**Main Text**

**Introduction:** State the background or problem that led to the initiation of the study. Lead systematically to the hypothesis of the study, and finally, to a restatement of the study purpose, which should match that in the abstract. Do not include conclu-
Discussion: In the Discussion, data should be interpreted to demonstrate whether they affirm or refute the original hypothesis. Care should be taken to avoid information obtained from historical facts and books and irrelevant to the purpose and results of the study. Discuss elements related to the purpose of the study and present the rationales that support the conclusion (summary) by referring to relevant literature. A discussion of study weaknesses and limitations should also be included.

Conclusion: The conclusion must be derived from your results. Here your new view of the problem you outlined in the introduction should be briefly stated.

References: To cite a reference with an author in the text, insert the author’s surname only and the citation number in superscript (e.g., Kim¹). For a reference with two authors, list both names in the citation (e.g., Kim and Park²). For a reference with three or more authors, use ‘et al.’ (Kim et al.³). The end of a sentence should be indicated by a citation number, not by a period or a comma (e.g., end of sentence¹; not as end of sentence¹). If two or more citation numbers are required, separate numbers with a comma (,) or a dash (-) and add a bracket (e.g., Boyes¹-³ Chapman¹²-⁵). The number of references is limited to 40 for original articles and 10 for case reports. The references should be listed on a separate page according to the citation order in the text (not alphabetically). Papers published in domestic journals should also be written in English according to the citation order in the text. References to journal articles should conform to the journal title abbreviations used in the Index MEDLINE. List names of all authors when six or fewer. When seven or more, list only the first three names and add et al. Authors should be listed by surname followed by initials.

Examples of references are as follows:

**Journal article**

**Book**

**Chapter in edited book**

**Online publication**

**Online sources**

**Tables:** Tables should be prepared with English characters and Arabic numerals and given a brief title in a phrase or a clause. Tables should be numbered in the order in which they are mentioned in the text. If an abbreviation is used in a table, it should be defined in a footnote below the table. The symbols should be used in the following order: *, †, ‡, §, ¶, ††, ‡‡. Each symbol must be defined in a footnote. Do not give the same information in tables that you give in the text or in figures.

**Figure Legends:** Illustrations should be numbered in the order in which they are mentioned in the text. Each illustration should have a legend provided in a sentence (not in a phrase) on a separate manuscript page after references. Staining techniques used should be described. Photomicrographs with no inset scale should have the magnification of the print in the legend.

**Figures:** Papers containing unclear photographic prints may be rejected. Each figure should be prepared in a separate file. The name of an image file should not contain the name(s) of the author(s) and must match the figure number such as Fig1.
If a figure contains two or more photographs, they should be assigned an Arabic numeral followed by capital letters in the English alphabet (example: Fig. 1A, Fig. 1B). Photographs of different patients should not be included in one figure and remove any writing that could identify a patient. When the release of confidential information is necessary, a written consent of the patient or the patient’s guardian should be submitted with photographs. Submit illustrations in JPEG, TIFF or GIF format. Color images will be accepted only when essential. However, photomicrographs are recommended to be prepared in color. Authors are responsible for the cost of color figures in print. Arrows or letters in figures should be inserted by Photoshop or Powerpoint. When accepted, the original figure files should be submitted. When using a digital camera, set the resolution to a minimum of 300 ppi (pixels per inch), and set the size of the image to 5×7 in (127×178 mm). Color and grayscale images, such as radiographs, must have a minimum resolution of 300 dpi, and line art drawings such as graphs must have a minimum resolution of 1,200 dpi. Any illustrations previously published should be accompanied by the written consent of the copyright holder which should be indicated below the figure. Authors explanation on the arrangement of figures can be inserted, if necessary.

Acknowledgements: Authors should acknowledge those who do not qualify as authors but who contributed to the research. Authors of manuscripts must disclose any potential conflicts of interest, research funding, and financial support in “Acknowledgements”. Acknowledgements are appropriately noted in the title page.

Special Features

Case Reports
A publication decision is based not on the rarity of a reported case but on its academic contribution.

Abstract: The English Abstract and the Korean abstract should not exceed 150 words and 350 characters, respectively. The abstract must be written as one unstructured paragraph.

Introduction: The reason for reporting the case and background should be stated in a clear and cohesive manner. It is not necessary to use the word “introduction”.

Case report: This section should include only relevant elements in a succinct manner.

Discussion: Discussion should focus on the case and pertinent literature.

References: References should not exceed 10.

Review Articles
Review articles should focus on a specific topic. Publication of these articles will be decided upon by the Editorial Board. Format of a review article is not limited.

Letters to the Editor
The journal welcomes readers comments or criticisms on articles published recently in the journal.

Article Processing Charge
There is no article processing charge (APC), also known as a publication fee, for accepted articles. We provide copy editing free of charge for all accepted articles and English proofreading free of charge for accepted articles by authors whose active language is not English.
